Define the Problem Statements

Date	15 March 2026
Project Name	HDI Predictor – Human Development Index Prediction & Recommendation Platform
Maximum Marks	2 Marks

Customer Problem Statement Template:

The Customer Problem Statement for the HDI Predictor – Human Development Index Prediction & Recommendation Platform project helps identify the key challenges faced by policymakers, researchers, students, and citizens in accessing and interpreting human development data. It focuses on understanding their needs, difficulties, and expectations regarding real-time HDI prediction, scenario simulation, and improvement guidance. By clearly defining these problems, the project aims to develop an interactive solution that provides instant HDI tier predictions and targeted recommendations based on life expectancy, education, and GNI per capita. Understanding the customer's perspective enables the team to design a solution that improves decision-making speed, accessibility, and engagement with development data.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A policymaker	assess how my country or region compares on human development so I can plan budgets and interventions.	I can only rely on the UNDP's official HDI report, which is published just once a year.	no accessible tool lets me enter current indicator values and get an instant, real-time prediction.	uncertain about the timeliness of my planning decisions, since I'm often working with year-old data.
PS-2	A development researcher	test how changes in education or income levels would affect a country's HDI tier before recommending a policy.	I have no easy way to simulate different "what-if" scenarios.	existing tools require coding/statistical expertise or manual spreadsheet recalculation.	frustrated by how slow and error-prone the manual process is, especially under research deadlines.
PS-3	A student or citizen	understand how life expectancy, education, and income together determine a	the HDI data I find online is presented as dense static tables and reports.	there's no interactive, visual way to explore how	disengaged and confused about a topic I'm

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
		country's development level.		the indicators interact.	genuinely curious to learn.
PS-4	A government official evaluating aid programs	identify which specific development indicator most needs intervention in a given region.	I can see the overall HDI score.	the report doesn't break down which indicator is the weakest or by how much it needs to improve.	unsure where to prioritize limited funding, risking wasted investment.
